RE: Year 4 required review of Stormwater Regulations

As part of our MS4 Permit, this year Wilton is required to review the Stormwater Regulations. Here are some preliminary observations on places where Section H, Stormwater Management and Erosion-Control Regulations could be updated.

Section 1.0. This section should refer explicitly to the MS4 permit and possibly pre-construction.

Section 3.0. This section could be clarified to refer to the Stormwater Manager and the waiver process should be clarified.

Section 4.0. This section could add in the Illicit Discharge Detection and Elimination (IDDE) ordinance proposed to the Select Board.

Section 5.0. This section contains terms not used in the regulations. In particular, look at definition of Critical Areas to align with changes in wetlands definitions.

Section 6.0. This section contains links to documents and may need to have updated appropriate references. Check consistency with other regs or WZO provisions. The Stormwater Manager or Building Inspector should be reviewing the pre-construction plans.

Section 7.0. This section should be reviewed to ensure that the tables and standards remain accurate in light of climate change and changes to the state standards.

Section 8.0. This section need to be aligned with language in the IDDE. It is important to address how/where the private stormwater infrastructure discussed here does or doesn't interact with the MS4 permit and IDDE. Soils information needs to be updated.

Section 12.0. This section should be reviewed to ensure that the permits described are accurate and if this section needs to cite such specific permits.

Section 13.0. This section need to be aligned with language in the IDDE.

Section 14.0. This section need to be aligned with language in the IDDE.

Permit: This needs to be updated and conformed with other permit applications.

Notice of Violation: Does this need to be spelled out with a form?

References: These should reviewed and evaluated. Is this section necessary?
