**Re: Town of Wilton, New Hampshire  
2017 NPDES New Hampshire Small MS4 General Permit  
Industrial Facility Stormwater Outreach**

To Whom It May Concern,

The **Town of Wilton** is contacting you to offer resources and recommendations that have been developed to improve stormwater quality within **Wilton** with the aim of meeting US Environmental Protection Agency's (USEPA) National Pollutant Discharge Elimination System (NPDES) permit requirements. It has come to the **Town of Wilton's** attention that **Cutting Tool Technologies, LLC** has activities that are regulated under the NPDES Multi-Sector General Permit (MSGP).

**The Town of Wilton** is considered a Small Municipal Separate Storm Sewer System (MS4) community, and because of this, must adhere to the USEPA's 2017 NPDES New Hampshire Small MS4 General Permit. Through this permit, the **Town of Wilton** must take certain steps to reduce stormwater runoff and associated pollutants that can threaten or impact water quality.

A new version of the MSGP was released by USEPA in 2021. The new version of the permit includes important new requirements for the various industrial sectors that are covered under the MSGP. For the 2021 version of the MSGP and all of its requirements, go to the USEPA MGSP page here <https://www.epa.gov/npdes/stormwater-discharges-industrial-activities-epas-2021-msgp>.

Both the NPDES MSGP and MS4 permits have overlapping requirements that must be met. As a result, the **Town of Wilton** is sharing the enclosed "Stormwater Pollution Control for Industrial Facilities Fact Sheet" that contains helpful information on how to reduce pollutants that could enter stormwater systems or nearby waterbodies. We would also like to invite you to visit the New Hampshire MS4 Stormwater Coalitions Website which provides additional resources. The New Hampshire Stormwater Coalitions Website can be located at <https://www.nhms4.des.nh.gov/>.

The **Town of Wilton** hopes that by sharing these resources we are able to collectively reduce stormwater pollution and improve water quality as a whole within our community, and throughout New Hampshire. If you have any further questions, or would like more information about **Wilton's** efforts, please reach out to **Nick Germain, Town Administrator/Stormwater Manager** at **603-654-3299**. We also encourage you to visit our stormwater webpage at: [https://www.wiltonnh.gov/government/stormwater management](https://www.wiltonnh.gov/government/stormwater%20management). Together we can have a large impact on improving water quality in New Hampshire.

Sincerely -Wilton's Stormwater Program Employees, Officials, and Volunteers

To Whom It May Concern,

The **Town of Wilton** is contacting you to offer resources and recommendations that have been developed to improve stormwater quality within **Wilton** with the aim of meeting US Environmental Protection Agency's (USEPA) National Pollutant Discharge Elimination System (NPDES) permit requirements. It has come to the **Town of Wilton's** attention that **Leighton A White** might have activities that are regulated under the NPDES Multi-Sector General Permit (MSGP).

The **Town of Wilton** is considered a Small Municipal Separate Storm Sewer System (MS4) community, and because of this, must adhere to the USEPA's 2017 NPDES New Hampshire Small MS4 General Permit. Through this permit, the **Town of Wilton** must take certain steps to reduce stormwater runoff and associated pollutants that can threaten or impact water quality.

A new version of the MSGP was released by USEPA in 2021. The new version of the permit includes important new requirements for the various industrial sectors that are covered under the MSGP. For the 2021 version of the MSGP and all of its requirements, go to the USEPA MSGP page here <https://www.epa.gov/npdes/stormwater-discharges-industrial-activities-epas-2021-msgp>.

Both the NPDES MSGP and MS4 permits have overlapping requirements that must be met. As a result, the **Town of Wilton** is sharing the enclosed "Stormwater Pollution Control for Industrial Facilities Fact Sheet" that contains helpful information on how to reduce pollutants that could enter stormwater systems or nearby waterbodies. We would also like to invite you to visit the New Hampshire MS4 Stormwater Coalitions Website which provides additional resources. The New Hampshire Stormwater Coalitions Website can be located at <https://www.nhms4.des.nh.gov/>.

The **Town of Wilton** hopes that by sharing these resources we are able to collectively reduce stormwater pollution and improve water quality as a whole within our community, and throughout New Hampshire. If you have any further questions, or would like more information about **Wilton's** efforts, please reach out to **Nick Germain, Town Administrator/Stormwater Manager** at **603-654-3299**. We also encourage you to visit our stormwater webpage at: [https://www.wiltonnh.gov/government/stormwater management](https://www.wiltonnh.gov/government/stormwater%20management). Together we can have a large impact on improving water quality in New Hampshire.

Sincerely -Wilton's Stormwater Program Employees, Officials, and Volunteers
